

## **Encon hosts LiftMaster CAPXL training**

Leading wholesale distributor Encon Electronics continues to make training a priority providing two seminars on November 17th led by LiftMaster Regional Trainer, Bill McCoy. Both sessions featured LiftMaster's new cloud-based access control unit – the CAPXL access control system.

“The CAPXL is a 4 door controller that accepts 26 weigand output and can accommodate up to 50,000 users,” McCoy said. The unit has Wifi connectivity and up to 300 feet of range.”

According to Tim Nordstrom, Encon's Outside Sales tech who attended one of the seminars, “The CAPXL is a completely different level of technology. What makes it unique is that the product does not use a traditional phone line. Instead, installers run it directly to an IP address.”

McCoy detailed how this new technology works. “The cellular connection is data only, not voice. Dealers arrange the IP information on their end and users only have to set up a small data plan. The unit uses minimal data.” The wireless connection goes from the CAPXL to the LiftMaster operator. “Using a SIP provider and DHCP internet connection is preferred”, McCoy added.

Over twenty dealers participated in one of the two sessions conducted by McCoy, and everyone seemed genuinely interested in the wireless direction access control products are headed, including Nordstrom. “The CAPXL programming is entirely different than what we've seen in the past. It's a perfect time for Encon and LiftMaster to collaborate on a training event like this one. We are educating our dealers on the latest technology on the market, and hopefully alleviating any uneasiness our dealers may have surrounding this new and/or unfamiliar technology.”

For more information about the LiftMaster CAPXL access control system, contact Encon at 800-782-5598 or visit Encon's new website [www.EnconElectronics.com](http://www.EnconElectronics.com).
