

Encon Electronics now stocks the Q-Seal 290S Traffic Detector Loop Sealant from Chemque, Inc.

Q-Seal 290S is a tough and durable polyurethane resin sealant designed to encapsulate, protect and insulate wire for loop detectors. Developed for both asphalt and concrete pavement, the Q-seal is waterproof, weather resilient and chemical resistant.

Q-Seal 290S is ideal for saw cut applications, requiring no mixing or heating. As a result, vehicular traffic is permitted immediately after application with no need for property or lane closure.

For over 35 years Chemque, Inc. has manufactured chemical specialties and equipment, developing a wide range of specialty resins, adhesives and foams and Encon is excited to add Chemque to our long list of manufacturers.

The addition of Chemque Q-Seal 290S to Encon's product line provides the dealer with a high quality filler, enabling them to quickly and efficiently finish loop jobs.
